Affordability Check

The following table shows whether each scheduled purchase is actually affordable based on projected cash at the time of purchase. If a purchase is not affordable at the scheduled month, the simulation automatically delays it until cash is sufficient.

Purchase	Scheduled Month	Cash Available	Cost Required	Left Over	Status
Option A — Trailer fixup	Month 1	$22,000	$4,000	$18,000	✓ **Affordable**
Option A — Permanent home	Month 25	$90,032	$16,000	$74,032	✓ **Affordable**
Option B — Buy House 1	Month 1	$22,000	$8,373	$13,627	✓ **Affordable**
Option B — Buy House 2	Month 38	$99,904	$28,000	$71,904	✓ **Affordable**

Purchase Delay Statistics (across all 1,000 Monte Carlo paths):

	Scheduled Month	Median Actual Month	% of Paths Delayed
Option A home purchase	Month 25	Month 26	0%
Option B House 2 purchase	Month 38	Month 39	0%

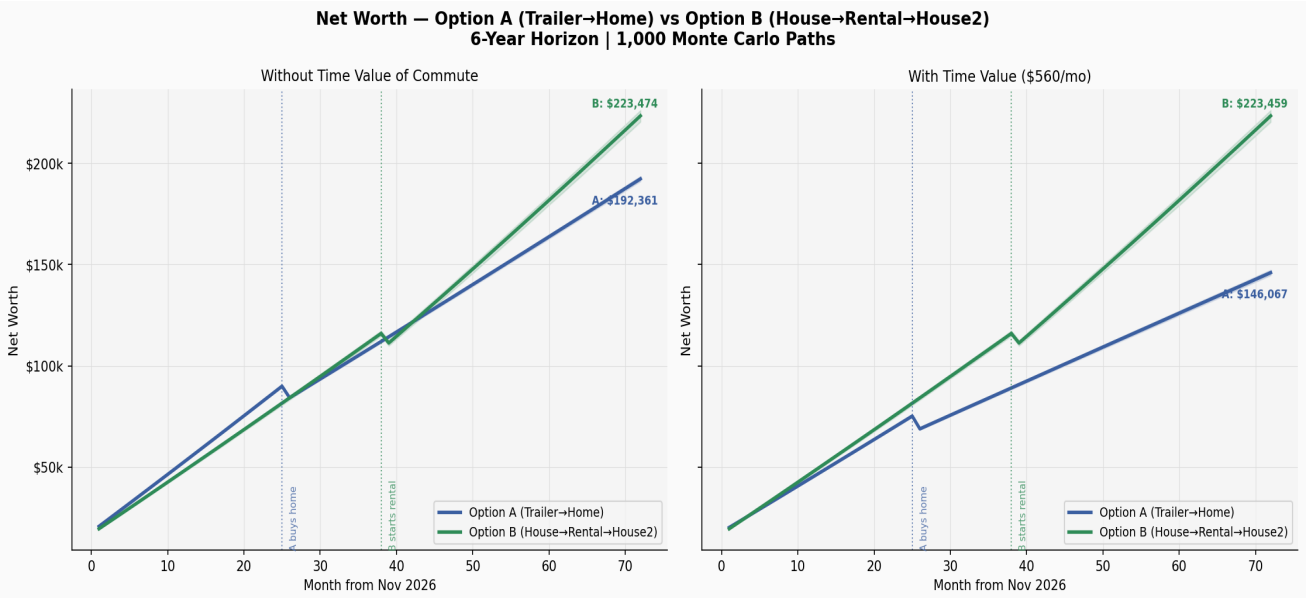

Chart 1: Net Worth — 6-year horizon. Option A (trailer→home) vs Option B (buy→rent→buy). Shaded bands show P10–P90 Monte Carlo uncertainty. Phase transition lines shown.

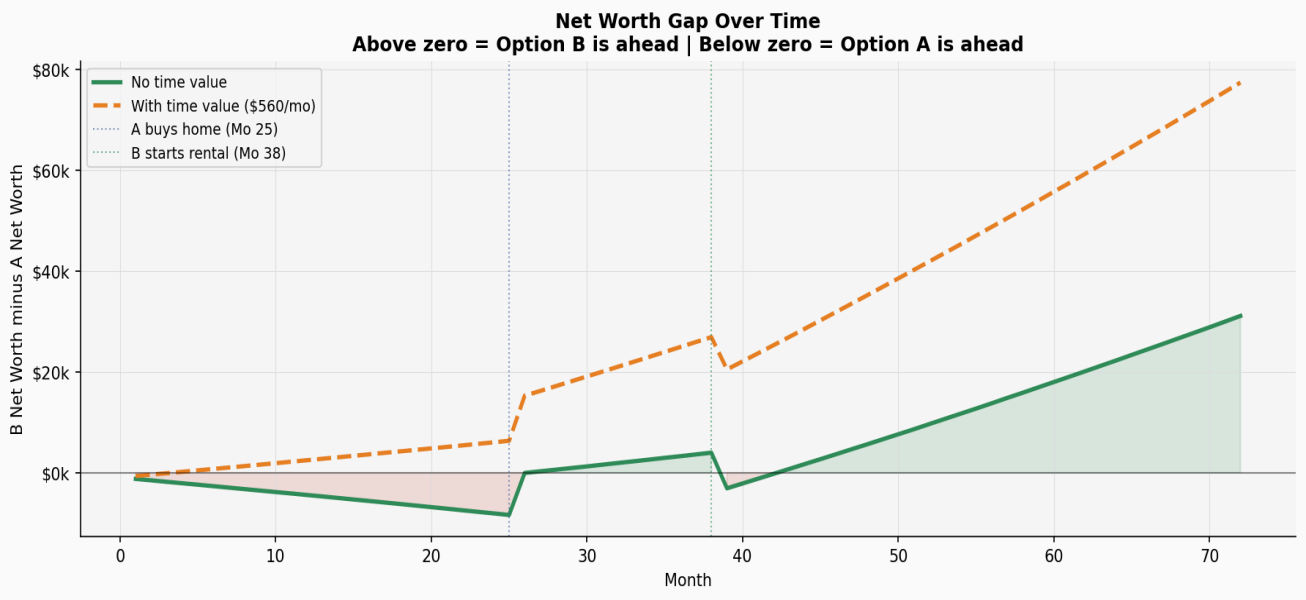

Chart 2: Net Worth Gap (B minus A). Above zero = Option B is ahead. Shows when and by how much each option leads.

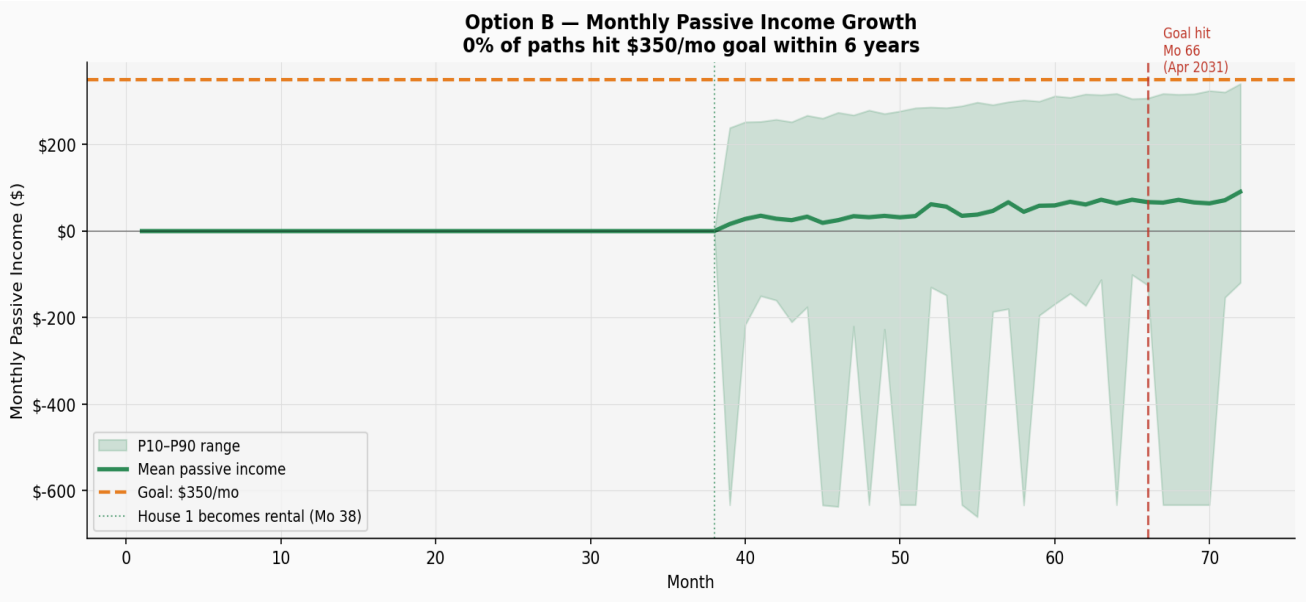

Chart 3: Option B monthly passive income growth. Goal line at $350/mo. 0% of simulation paths achieve this within 6 years.

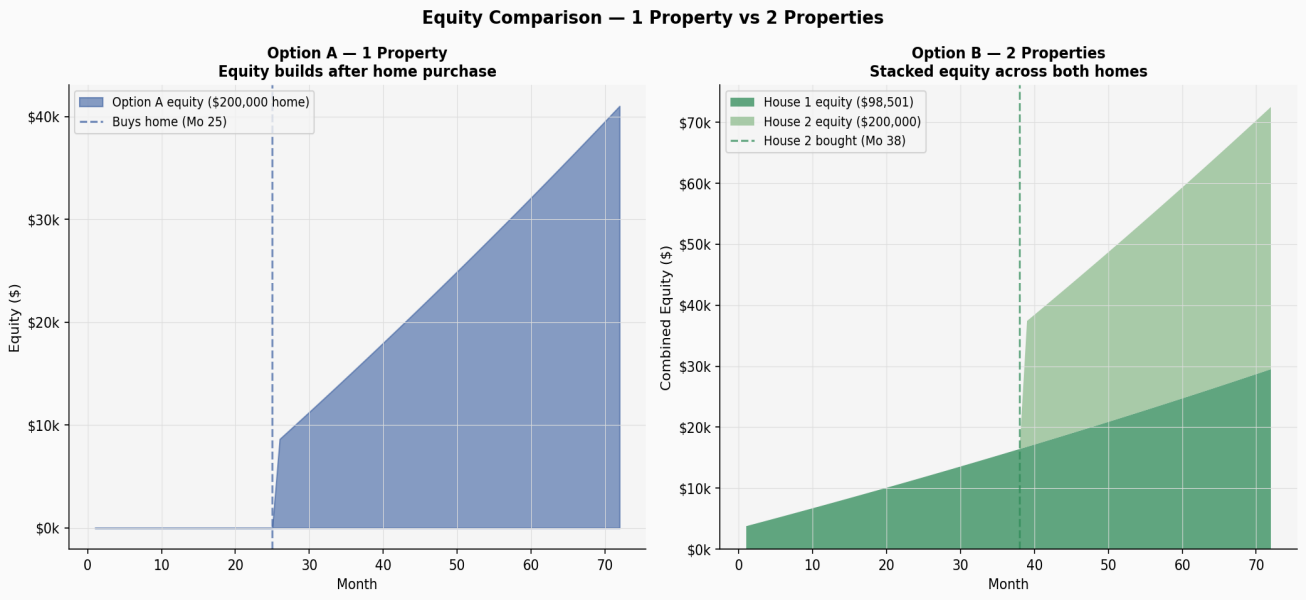

Chart 4: Equity comparison. Option A builds equity in one home; Option B builds stacked equity across two properties.

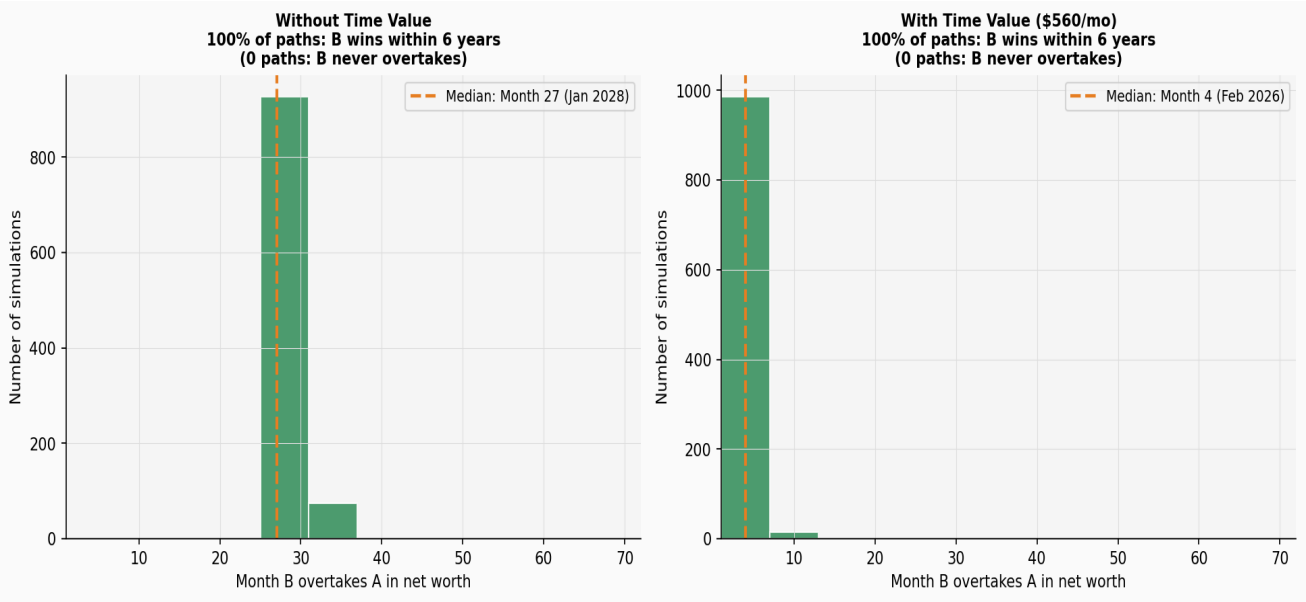

Chart 5: Break-even distribution — month B net worth first exceeds A for 3+ months.

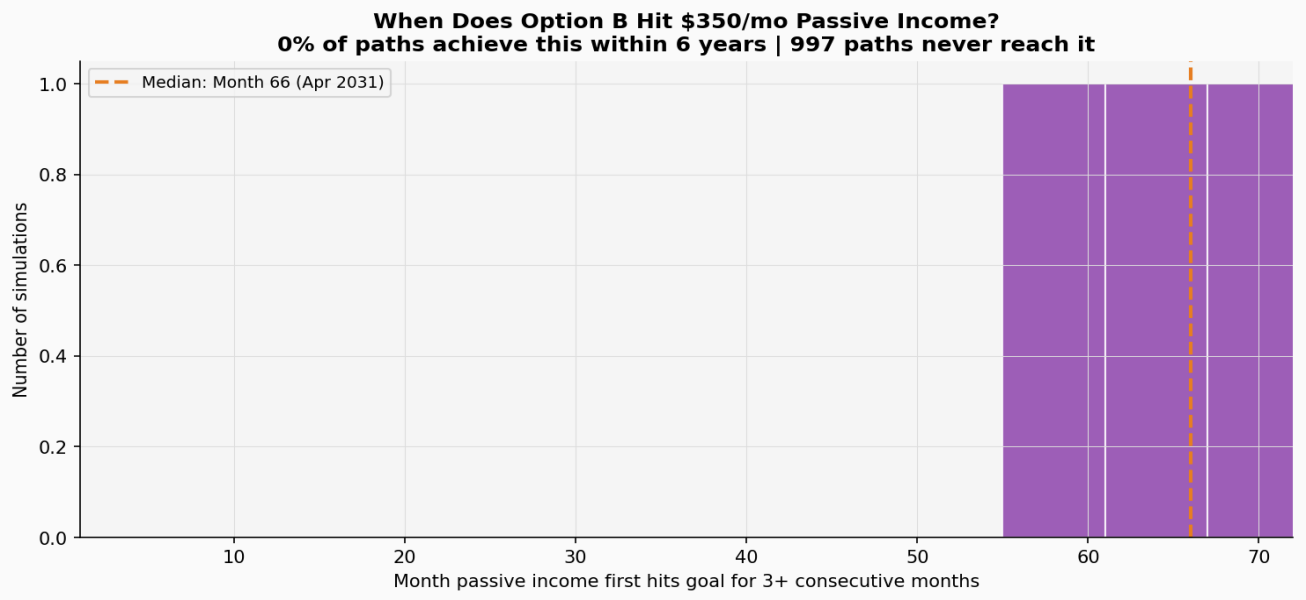

Chart 6: Goal achievement distribution — month Option B first sustains $350/mo passive income.

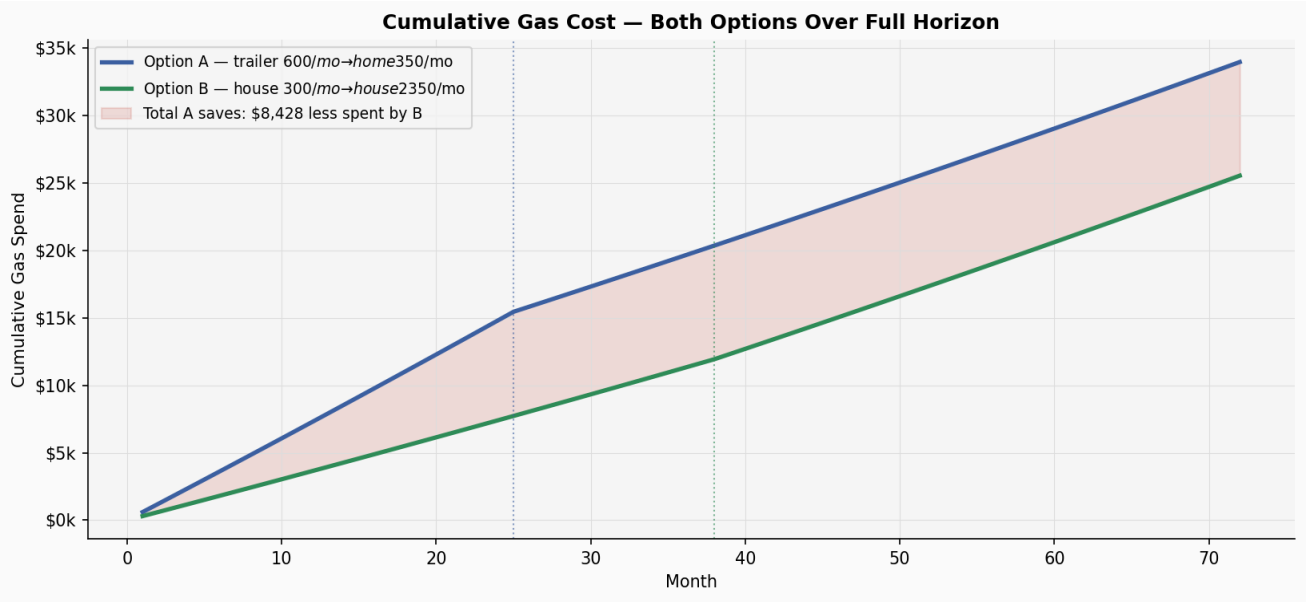

Chart 7: Cumulative gas costs. Both options transition gas rates at their respective move-out months.

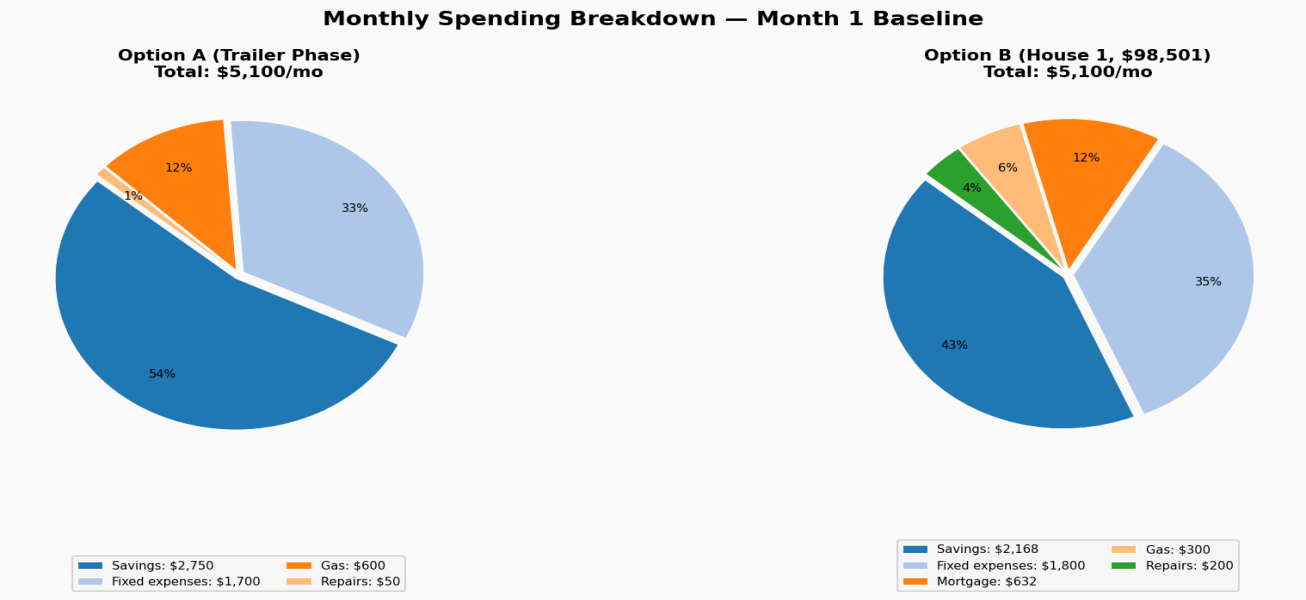

Chart 8: Monthly spending breakdown at Month 1 baseline using actual config values.

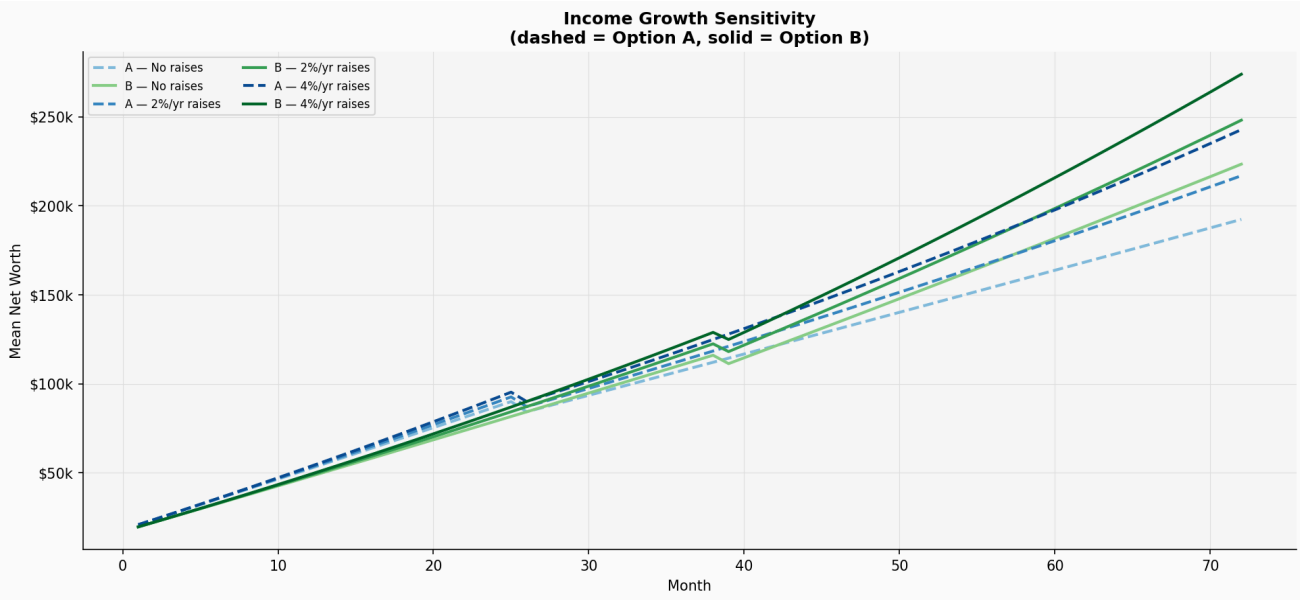

Chart 9: Income growth sensitivity — net worth across three raise scenarios.

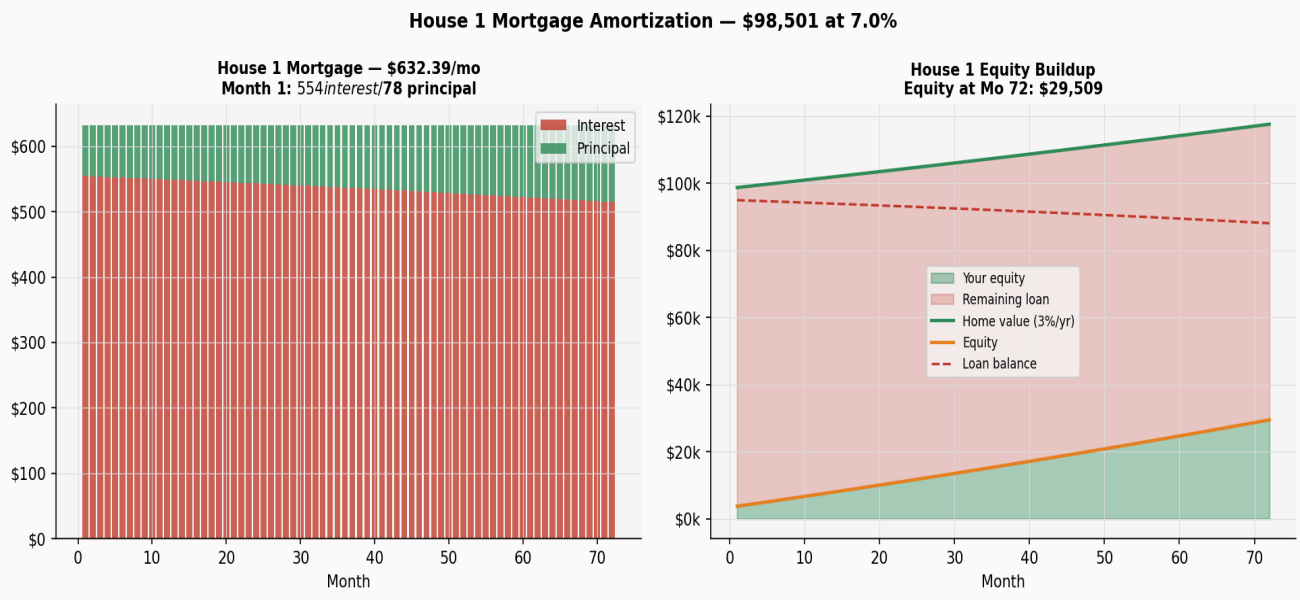

Chart 10: House 1 mortgage amortization. $98,501 at 7.0% — interest/principal split and equity growth.

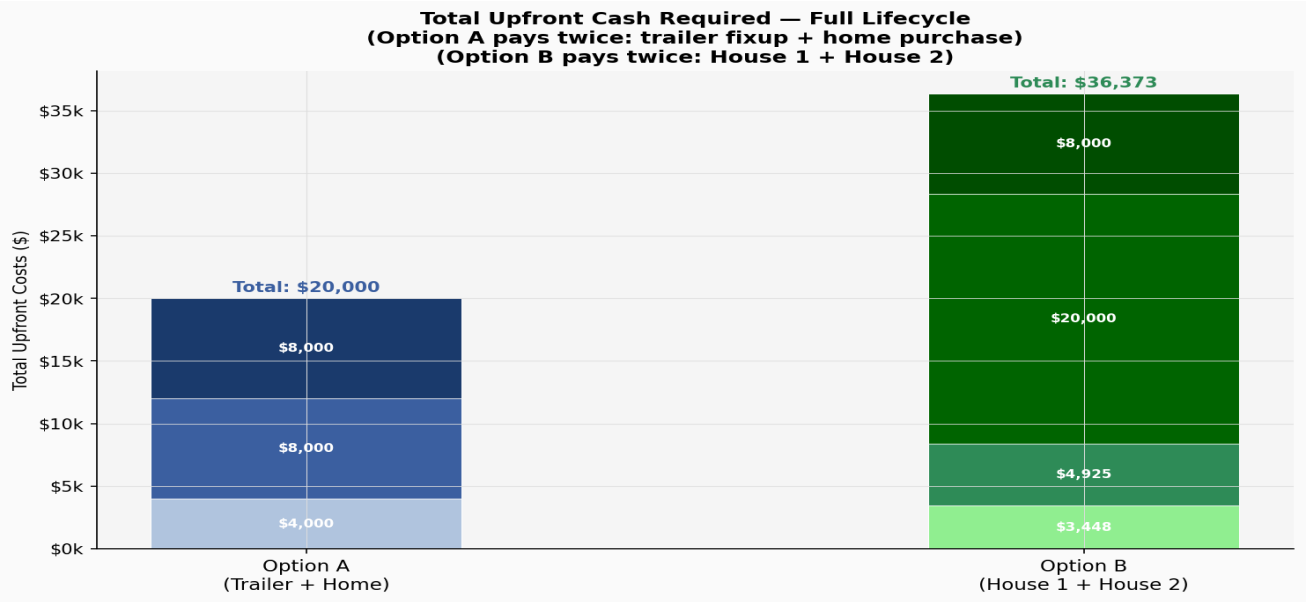

Chart 11: Total lifecycle upfront costs. Both options pay twice — Option A pays for trailer fixup then permanent home; Option B pays for House 1 then House 2.

Analyst Verdict

At 6 years, Option B leads by $31,113 in the base scenario (no time value). With $560/mo commute time value included, Option B leads by $77,392.

Option B achieves the $350/mo passive income goal in 0% of simulation paths, with a median achievement month of 66 (Apr 2031).

Key risks to monitor:

- Option B cash after House 1 closing: $13,627. Repair spikes in year 1–2 are the primary short-term risk.
- Option A makes two separate purchases totaling $20,000 in upfront costs. Option B also pays twice but the second payment (House 2) is partially funded by rental income.
- Vacancy risk on House 1 rental modeled at 10%. Good tenant screening is worth the time.
- If income drops significantly, Option A's lower early fixed costs (trailer phase) provide more breathing room.
